| 9. | Suggested Build Phases                  | 10 |

# 1. Purpose & Vision

This document defines the requirements for the official InnovateX website. InnovateX is the student club of the Department of Computer Science & Engineering (Artificial Intelligence & Machine Learning) at MIT Mysore. The website serves as the central digital home for the club — a place to express its identity, showcase its programs and impact, and keep the department community informed about past achievements and upcoming events.

## 1.1 Goals

- Present InnovateX and the CSE (AI & ML) department in a way that feels modern, alive, and student-driven — not a generic college page.
- Showcase the club's four core initiatives (Arivu, Arghya, Aroohan, and the COSMIC magazine) with their own dedicated spaces.
- Document the club's history — what has happened previously — and announce what is coming up.
- Introduce the people: faculty advisors and the student core team (which rotates every academic year).
- Act as a living archive that can be updated each year as the core team and events change.

## 1.2 The Feeling

A visitor should land on the site and immediately feel that this is an ambitious, creative, technology-forward student community. The experience should feel premium and intentional — clean motion, confident typography, and a sense that real people built and run this. It should make a prospective student want to join, and make current members proud to share it.

## 1.3 Primary Audiences

- Current department students (members) — to stay informed and feel ownership.
- Prospective and junior students — to understand what InnovateX is and want to participate.
- Faculty, college administration, and visitors — to see the department's activity and impact.
- External viewers — alumni, partner schools, and the wider community.

# 2. About InnovateX (Background)

InnovateX is currently in its second year of operation. Every student in the CSE (AI & ML) department is automatically a member of the club. For smoother functioning, specific responsibilities are assigned through positions such as coordinators, secretary, and other roles. The core team changes every academic year, so the website must treat team information as something that rotates annually.

The club runs several recurring programs and one flagship publication. These are described in detail in Section 4.

## 2.1 Key Facts

| Field         | Value                                                                      |
|---------------|----------------------------------------------------------------------------|
| Club name     | InnovateX                                                                  |
| Department    | Computer Science & Engineering (AI & ML)                                   |
| Institution   | MIT Mysore (Maharaja Institute of Technology, Mysore - Belavadi)           |
| Age           | In its 2nd year of operation                                               |
| Membership    | Every department student is a member; core roles assigned for coordination |
| Core team     | Coordinators, Secretary, and other positions — rotates every academic year |
| Faculty (HOD) | Dr. Ranjith K C, Head of Department, CSE (AI & ML)                         |

## 3. Site Structure (Sitemap)

The website is a multi-page site. The structure below defines every page and how they relate.

| Page           | Purpose                                                                                                                                               |
|----------------|-------------------------------------------------------------------------------------------------------------------------------------------------------|
| Home           | Landing page. Hero introducing InnovateX, overview of the club, quick links into the four initiatives, highlights, and a snapshot of upcoming events. |
| About          | About the club and the department, the mission, the story so far, and the faculty advisors.                                                           |
| Arivu          | Dedicated program page: community school outreach. Past sessions + upcoming sessions.                                                                 |
| Arghya         | Dedicated program page: student-led workshops for the whole college. Past + upcoming.                                                                 |
| Aroohan        | Dedicated program page: in-department activities (KT sessions, GDs, debates, alumni talks). Past + upcoming.                                          |
| COSMIC         | Magazine page: all editions, viewable/downloadable, with theme and editorial board per edition.                                                       |
| Team           | Current core team (rotates yearly), with roles. Option to view previous years' teams.                                                                 |
| Contact / Join | How to reach the club, social links, and how students can get involved.                                                                               |

### 3.1 Global Navigation

A persistent top navigation bar appears on every page with the InnovateX logo (links to Home) and links to: About, Programs (dropdown to Arivu / Arghya / Aroohan), COSMIC, Team, and Contact. The navigation should collapse into a mobile menu on small screens.

### 3.2 Global Footer

A footer on every page containing: the InnovateX logo, the department logo, a short tagline, quick links to all pages, social media links (LinkedIn primary), and a credit line. The footer should also link to all COSMIC editions.

## 4. Programs & Initiatives (Content Detail)

InnovateX runs three recurring programs plus a flagship magazine. Each program gets its own page following a consistent template (see Section 5), but the content differs as detailed below.

### 4.1 Arivu — Community Outreach

Arivu is the club's social-impact outreach initiative. Under a Memorandum of Understanding (MOU) with a local government school, students from the department visit the school every Saturday and teach school children subjects like general knowledge, mathematics, and reasoning — delivered in a fun, interactive, activity-based way so the children gain knowledge and confidence beyond their textbooks.

#### *What the Arivu page must convey*

- The mission: empowering young minds and fostering social responsibility.
- The format: weekly (Saturday) visits, hands-on activities — logical puzzles, math games, GK discussions, collaborative tasks.
- The partner: the government school (e.g., Govt. High School, Naguvanahalli) and the MOU arrangement.
- A log of past sessions (date, topic, student coordinator and volunteers, photos).
- Upcoming sessions and how members can volunteer.

### 4.2 Arghya — Student-Led Workshops

Arghya is a “for students, by students” program. A resource person — who is a student from the department — teaches a large audience (hundreds of students from across the entire college) about a topic related to engineering and technology. Sessions are hands-on and practical, sometimes run in collaboration with bodies like the Google Developer Student Club. A past edition, for example, was a hands-on AI workshop covering AI tools across design, video, coding, and audio, where senior students shared real project-based insights.

#### *What the Arghya page must convey*

- The peer-learning spirit: students teaching students, building confidence and curiosity.
- Scale: open to the whole college, often hundreds of participants.

- Topics covered and tools/skills taught (e.g., practical AI workflows, prompting, design tools).
- Student presenters / resource persons for each edition.
- Collaborations (e.g., GDSC) where relevant.
- A log of past workshops + upcoming workshops with registration where applicable.

### 4.3 Aroohan — In-Department Activities

Aroohan covers all in-house / in-department activities that build skills and community within the department. This includes knowledge-transfer (KT) sessions, group discussions (GDs), debates, and alumni talks — where alumni working in the corporate world share their journeys and insights.

#### *What the Aroohan page must convey*

- The variety of activities: KT sessions, GDs, debates, alumni talks.
- The purpose: skill-building, peer knowledge sharing, industry exposure, community.
- Alumni connections: featured speakers, their companies/roles, talk topics.
- A log of past activities (type, date, speaker/host, summary, photos).
- Upcoming sessions.

### 4.4 COSMIC — Department Magazine

COSMIC is the official creative magazine of the department, produced by the student community. It is published twice a year — on the 1st of January and the 1st of June (once every six months / per semester). Each edition has a theme (for example, COSMIC 3.0 released on 1 January 2026 was inspired by the year 2050) and is produced by an editorial board of students under faculty guidance. The magazine is a platform where imagination meets innovation.

#### *What the COSMIC page must convey*

- All editions to date (COSMIC 1.0, 2.0, 3.0, and future editions), newest first.
- For each edition: edition number, release date, theme, cover image, editorial board, and a view/download link to the magazine.
- The publication cadence: every six months (1 January and 1 June).
- Credit to the editorial board and faculty for each edition.

## 5. Page Requirements (Detailed)

### 5.1 Home Page

- Hero section: bold introduction to InnovateX with the club identity and a strong first impression (animated, premium feel).
- Short “who we are” statement and key stats (e.g., years active, programs, students reached, magazine editions).
- Four feature cards or sections linking to Arivu, Arghya, Aroohan, and COSMIC.
- Highlights / recent activity strip pulling the latest event from each program.

- Upcoming events snapshot.
- Call to action to explore the club and to join / follow on LinkedIn.

## 5.2 About Page

- About the club: what InnovateX is, its mission, and its story so far (2 years).
- About the department: CSE (AI & ML) at MIT Mysore.
- How the club works: every student is a member; core roles for coordination; yearly rotation.
- Faculty advisors section with photos, names, and roles (e.g., HOD Dr. Ranjith K C).

## 5.3 Program Pages (Arivu / Arghya / Aroohan) — Shared Template

Each program page follows the same structure for consistency, with content from Section 4:

1. Program hero: program name, one-line description, and program logo.
2. Overview: what the program is and why it matters.
3. How it works: format, frequency, and who it's for.
4. Past events: a chronological gallery/list of previous sessions — each with date, title, people involved, a short summary, and photos.
5. Upcoming events: scheduled sessions with date and details, plus a way to participate/volunteer/register.
6. Impact: numbers or outcomes where available (e.g., participants reached).

## 5.4 COSMIC Page

- Intro to the magazine and its publication cadence.
- A grid of all editions (newest first), each showing cover, edition number, date, and theme.
- Each edition opens to / links to a viewable or downloadable copy and lists the editorial board.

## 5.5 Team Page

- Current academic year's core team displayed with photo, name, and role.
- Clearly indicate the active year (e.g., “2025–26 Core Team”).
- Ability to browse previous years' teams (archive), since the team rotates annually.
- Mention that all department students are members.

## 5.6 Contact / Join Page

- How to get involved with InnovateX and its programs.
- Social media links (LinkedIn as primary).
- A simple contact method (form or email) and the department's location/identity.

## 6. Design Direction

### 6.1 Overall Style

Modern, premium, and student-driven. Dark, confident base with a strong brand accent, generous spacing, bold typography, and purposeful motion. The site should feel cohesive across every page — one design language, consistent components.

### 6.2 Brand & Color

The visual identity is driven by the InnovateX logo (a stylized “X” in purple tones) and the department's AI & ML circuit-style logo. Use a deep near-black background with a purple brand accent and a soft light-pink secondary accent. Avoid heavy gradients; prefer solid, intentional colors and clean glows.

| Token            | Direction                                                         |
|------------------|-------------------------------------------------------------------|
| Background       | Deep near-black (e.g., #0D0D0F)                                   |
| Brand accent     | Purple (from the InnovateX logo)                                  |
| Secondary accent | Soft light pink (solid fill, used sparingly for small highlights) |
| Text             | White / off-white for body; muted gray for secondary text         |
| Logos            | InnovateX logo (primary), department AI & ML logo (secondary)     |

### 6.3 Typography

- A bold, characterful display typeface for large headings and section titles.
- A clean, highly readable sans-serif for body text.
- Large, confident section titles; comfortable body sizing; clear hierarchy.

### 6.4 Motion & Interaction

- Smooth, premium scrolling (inertia/eased) across the site.
- Scroll-triggered reveals for section titles and content as the user moves down the page.
- A cinematic hero animation on the home page that introduces the brand.
- Subtle, intentional micro-interactions on hover and navigation — never distracting.
- All motion must respect reduced-motion accessibility preferences.

### 6.5 Imagery

- Real event photos from Arivu, Arghya, Aroohan, and COSMIC launches.
- Faculty and team portraits.
- Magazine cover images for each COSMIC edition.
- Consistent treatment (aspect ratios, rounded corners, subtle overlays) across galleries.

## 7. Technical Requirements

| Area           | Requirement                                                                                          |
|----------------|------------------------------------------------------------------------------------------------------|
| Type           | Multi-page responsive website (single-page-app style with client-side routing acceptable)            |
| Framework      | Modern component-based frontend (e.g., React + Vite) — developer's choice if equivalent              |
| Styling        | Utility-first CSS or equivalent; one shared design-token system across all pages                     |
| Animation      | A modern animation library for scroll and entrance effects; smooth-scroll library for inertia        |
| Responsiveness | Mobile-first; must work cleanly on phone, tablet, and desktop                                        |
| Performance    | Fast load, optimized images (compressed, lazy-loaded), minimal layout shift                          |
| Accessibility  | Readable contrast, keyboard navigable, respects prefers-reduced-motion                               |
| Content model  | Event and team data structured so editions/years can be added or updated easily each year            |
| Assets         | All logos and images organized in a single assets/public location with consistent naming (no spaces) |
| Hosting        | Deployable to a static host (e.g., Vercel/Netlify) with a custom domain option                       |

### 7.1 Content Maintainability

Because the core team changes every year and new events and magazine editions are added continuously, content (team members, program events, COSMIC editions) should live in clearly structured, easy-to-edit data files or collections — separated from layout — so the site can be updated each semester without redesigning pages.

## 8. Content To Be Collected

The following assets and information are needed to populate the site. Items can be added progressively.

| Category | Needed                                                              |
|----------|---------------------------------------------------------------------|
| Logos    | InnovateX logo (transparent PNG preferred), department AI & ML logo |

| Category         | Needed                                                                                  |
|------------------|-----------------------------------------------------------------------------------------|
| <b>Club copy</b> | Final mission statement, the club story, key stats                                      |
| <b>Faculty</b>   | Names, roles, photos, short bios (HOD and advisors)                                     |
| <b>Core team</b> | Current year's members: names, roles, photos                                            |
| <b>Arivu</b>     | Past session details (dates, topics, coordinators, volunteers) + photos; upcoming dates |
| <b>Arghya</b>    | Past workshop details (topics, presenters, collaborators) + photos; upcoming dates      |
| <b>Aroohan</b>   | Past activities (KT/GD/debate/alumni talks, speakers, topics) + photos; upcoming dates  |
| <b>COSMIC</b>    | Each edition: number, date, theme, cover image, editorial board, magazine file/link     |
| <b>Social</b>    | LinkedIn and any other official social links                                            |
| <b>Contact</b>   | Official contact email or method for the club                                           |

## 9. Suggested Build Phases

To keep the build focused and avoid scope creep, the work can be sequenced as follows:

7. Foundation: project setup, routing, global navigation + footer, design tokens, shared components.
8. Home page with the hero and the four initiative entry points.
9. Program page template, then populate Arivu, Arghya, and Aroohan.
10. COSMIC page and the About page.
11. Team page (current year + archive structure).
12. Contact/Join page, polish, motion pass, performance + accessibility, then deploy.

*End of document.*
